The Economics of Knowledge Generation and Distribution: The Role of Interactions in the System Dynamics of Innovation and Growth (Routledge Studies in the Modern World Economy)

The Economics of Knowledge Generation and Distribution: The Role of Interactions in the System Dynamics of Innovation and Growth (Routledge Studies in the Modern World Economy)

Contemporary capitalistic systems have been undergoing profound transformations determined by the transition towards the so-called knowledge based economy, i.e. a competitive system based on the capabilities firms have to create, use and circulate knowledge. These transformations concern both the characteristics of productive and innovative processes, and the resources used in these activities. This book captures these changes, where traditional R&D investments undertaken internally by firms are increasingly and strategically complemented by external sources of innovation and new knowledge.

Collaborations between firms, and between firms and other organizations, as well as the mobility of human capital, are strategic processes in order to share and circulate knowledge and competencies. They are also key determinants in the creation of new knowledge and innovation, and ultimately in growth dynamics. The circulation and distribution of knowledge is now a key input in the production of knowledge. Knowledge and innovation are understood as the result of collective and interactive processes at the system level, and less at the micro level. In other words, new knowledge production is less and less the result of individualistic behaviours of the firms and much more the effect of explicit and pro-active interactions and transactions put in place by local networks of innovators. In this perspective, economic space is much more defined by the quality of the interactions among actors rather than by their mere technological, sectoral or geographical proximity.

This book brings together new conceptual and empirical contributions and blends the analysis of the technological and geographical spaces in which innovation and knowledge are produced.
